## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-28 and 59-61, drawn to method of diagnosing malignancy and kit therefor, classified in class 435, subclass 7.2, for example.
  - II. Claims 29-43 and 59-61, drawn to method of screening malignancy and kit therefor, classified in class 436, subclass 63, for example.
  - III. Claims 44-61, drawn to method of monitoring malignancy and kit therefor, classified in class 435, subclass 973, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are directed to related methods. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed have materially different mode of operation, function, and effect; are mutually exclusive; and are not obvious variants of each other in that Invention I detects for the presence of intact and fragmented rare cells and correlates the result to diagnosis of disease; Invention II is a screening assay that detects for the presence of intact and fragmented rare cells in comparison to normal populations of cells to provide a determination of the presence of a disease in a subject; and Invention III provides

Art Unit: 1641

multiple or serial quantitation of the concentration of intact and fragmented rare cells in relation to time and in response to treatment to monitor progression of a disease.

Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, because the search required for Group I is not required for Group II, and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper. Literature search for each method and kit therefor, is distinct since the structural requirements of each invention are different. While searches would be expected to overlap, there is no reason to expect the searches to be coextensive.

2. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Art Unit: 1641

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
